

## English

### Congratulations!

You now own the Playtex® Diaper Genie® Twistaway®, the only diaper disposal system that individually wraps diapers in a specially designed film, sealing away odor and germs.

**How to Use** *Tightly rolled diapers work best. Fold the diaper's adhesive tabs to the inside of the diaper to prevent from tearing the refill film.*

Open the Lid by pressing the Safety Latch. While holding the Safety Latch, lift the Lid.

Insert a rolled diaper until you feel it fit tightly between Securing Clips (halfway between Securing Clips is approx. 4 to 5 inches into the pail). Improperly placed diapers will result in a looser seal which may allow odor to escape.

Close the Lid and make sure the Safety Latch snaps shut. Turn the Twist Cap at least 3 times clockwise to seal the diaper. (You should hear a click as you complete each turn.)

### How to Empty

*First turn the Twist Cap a few times before emptying your Diaper Genie® Twistaway® pail. The Cutter in the Twist Cap works best when a tight seal is made.*

While pushing down the Cutter Button, turn the Twist Cap once clockwise. Release the Cutter Button and continue to turn the Twist Cap until the Cutter Button pops up. You will know the refill film has been completely cut when you stop feeling resistance in the Cutter Cap.

Grabbing the Handle with one hand, hold the Diaper Genie Twistaway pail over a garbage can and push the Bottom Button to open the Base. Empty the diapers. Close the Base.

Open the Lid. Prepare the refill for next use by pulling the film up several inches so you can tie a knot. Push the knot down into the opening and close the Lid.

### How to Change Refill

Open the Lid, remove the refill cartridge and replace with a new refill.

Prepare the refill for next use by pulling the film up several inches and tying a knot. Push the knot down into the opening, and close the Lid.

### Helpful Hints

If your inserted diapers are not sealing individually:

- For the first few inserted diapers, turn the Twist Cap an additional two or three times to help make a proper seal. After you have inserted three diapers, there should be enough weight for each diaper to be individually sealed.
- When you insert the diaper, make sure it is between the Securing Clips before you turn the Twist Cap. This is especially important for small size diapers. Try turning smaller diapers on their sides so they fit tightly between the Securing Clips.

### Conseils pratiques

Si les couches que vous insérez ne sont pas scellées individuellement :

- Tournez le disque deux ou trois fois de plus pour les premières couches afin de mieux les sceller. Après la troisième couche, le poids devrait être suffisant pour que les couches soient individuellement scellées.
- Lorsque vous insérez la couche, assurez-vous de la placer correctement entre les pinces de retenue avant de tourner le disque. Cette étape est particulièrement importante dans le cas des petites couches. Essayez de placer les petites couches sur le côté pour qu'elles se logent plus solidement entre les pinces de retenue.

### Sugerencias Útiles

Si los pañales insertados no se sellan en forma individual:

- Luego de insertar los primeros pañales, gire la Tapa Giratoria dos o tres veces más para sellar en forma adecuada. Después de insertar tres pañales, debería haber peso suficiente para que cada pañal permanezca sellado en forma individual.
- Cuando inserte el pañal, asegúrese de que quede entre las Grapas de Seguridad antes de girar la Tapa Giratoria. Esto resulta especialmente importante en el caso de pañales pequeños. Intente doblar los pañales pequeños por sus costados de manera que se ajusten bien entre las Grapas de Seguridad.
